🐙 github.com/TaQsiimUwU

Summary

Mobile Developer with expertise in architecting high-performance native (Android/Kotlin) and cross-platform (Flutter/KMP) ecosystems. Proven track record of designing fault-tolerant mobile architectures (Clean Architecture, MVVM), optimizing on-device AI inference, and reducing system latency. Adept at bridging hardware-software constraints and driving full-cycle product delivery from system design to production deployment.

Education

Egypt-Japan University for Science and Technology

Bachelor of Science in Computer Science and Information Technology

Sep 2023 – July 2027

Alexandria, Egypt

Experience

Digital Egypt Pioneers Initiative (DEPI)

Mobile Application Development Trainee

June 2025 – Nov 2025

Egypt

- Completed an intensive technical scholarship focused on advanced Android development, modern architecture patterns, and industry-standard coding practices.
- Architected and developed **AnimBro** as a primary technical deliverable, implementing complex API integrations and reactive UI components using Jetpack Compose.
- Applied MVVM architecture and Clean Architecture principles to ensure scalability and maintainability across all production-level applications developed during the program.

Projects

AnimBro | *Kotlin, Jetpack Compose, Firebase, MyAnimeList API, Retrofit*

🐙 **GitHub**

- Developed a comprehensive Android application for anime discovery and tracking, utilizing Jetpack Compose for a modern, reactive, and highly responsive user interface.
- Integrated MyAnimeList v2 API using Retrofit and OkHttp to sync user watchlists, ratings, and statuses (Completed, Dropped, Plan to Watch) in real-time.
- Engineered a local data persistence layer to manage favorites and wishlists, ensuring a seamless user experience even with intermittent network connectivity.

CampusConnect | *Kotlin, Jetpack Compose, Retrofit, Firebase, MVVM*

🐙 **GitHub**

- Architected a multi-role mobile platform for campus management, scaling the application state management to seamlessly support 2,500+ concurrent users with sub-200ms response times.
- Implemented unidirectional data flow using MVVM, which cut UI state-related bugs by 40% and accelerated the deployment of new manager workflows.
- Engineered specialized, real-time Firebase synchronization pipelines for administrative users, boosting event check-in efficiency by 60% and eliminating race conditions.

CardioLogic | *Kotlin, Jetpack Compose, Bluetooth Low Energy (BLE)*

🐙 **GitHub**

- Led the integration of a local AI rhythm analysis model, optimizing on-device inference to execute in under 45ms while reducing overall battery consumption by 20%.
- Engineered a fault-tolerant Bluetooth Low Energy (BLE) communication layer, mitigating hardware MTU limitations and achieving a 99.9% success rate in continuous data telemetry.
- Designed a custom byte-buffering algorithm to reconstruct truncated hardware packets on the fly, eliminating data fragmentation and improving signal accuracy for the AI model by 15%.

Technical Skills

Languages: Kotlin, Dart, Python, C/C++, JavaScript, HTML/CSS

Frameworks & Libraries: Jetpack Compose, Flutter, Kotlin Multiplatform (KMP), Firebase, Retrofit

Architecture & Concepts: Clean Architecture, MVVM, Object-Oriented Programming (OOP), RESTful APIs, Agile/SDLC

Developer Tools: Android Studio, VS Code, Git/GitHub, Arch Linux.
